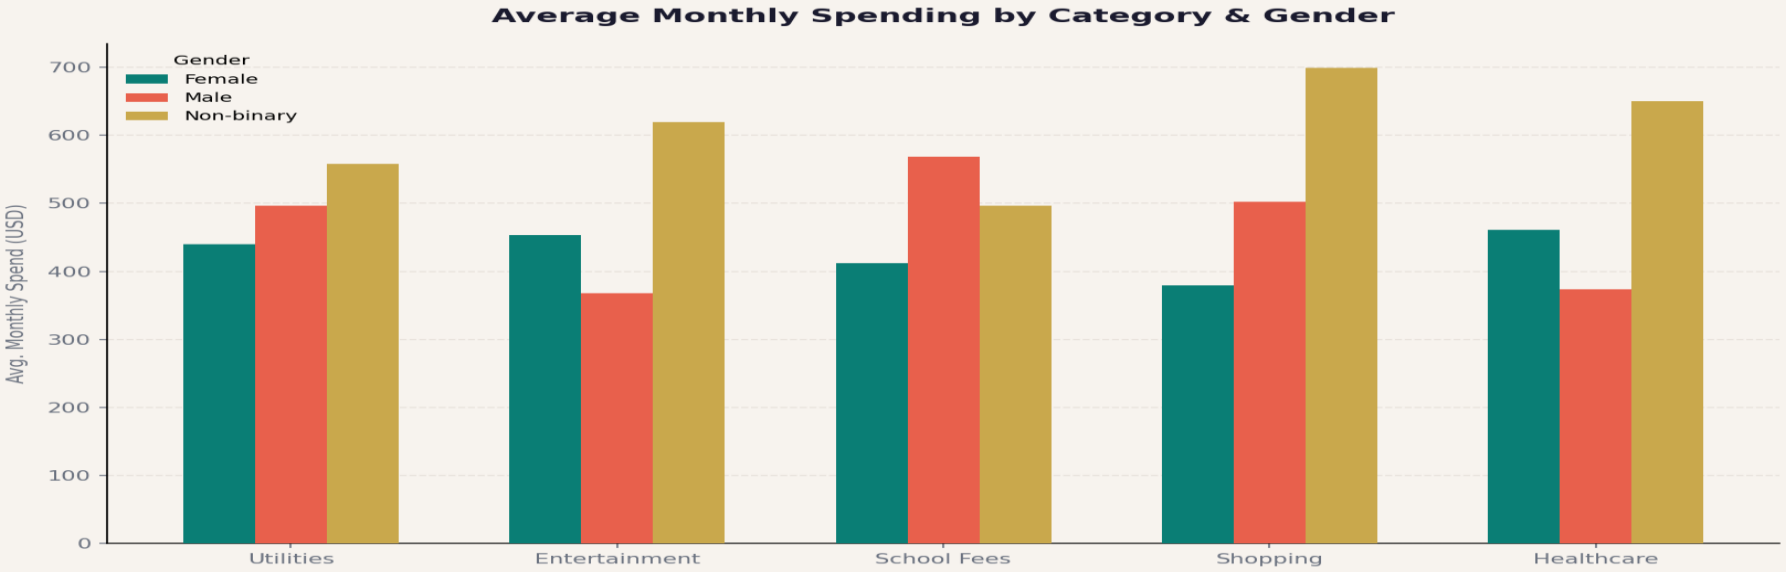
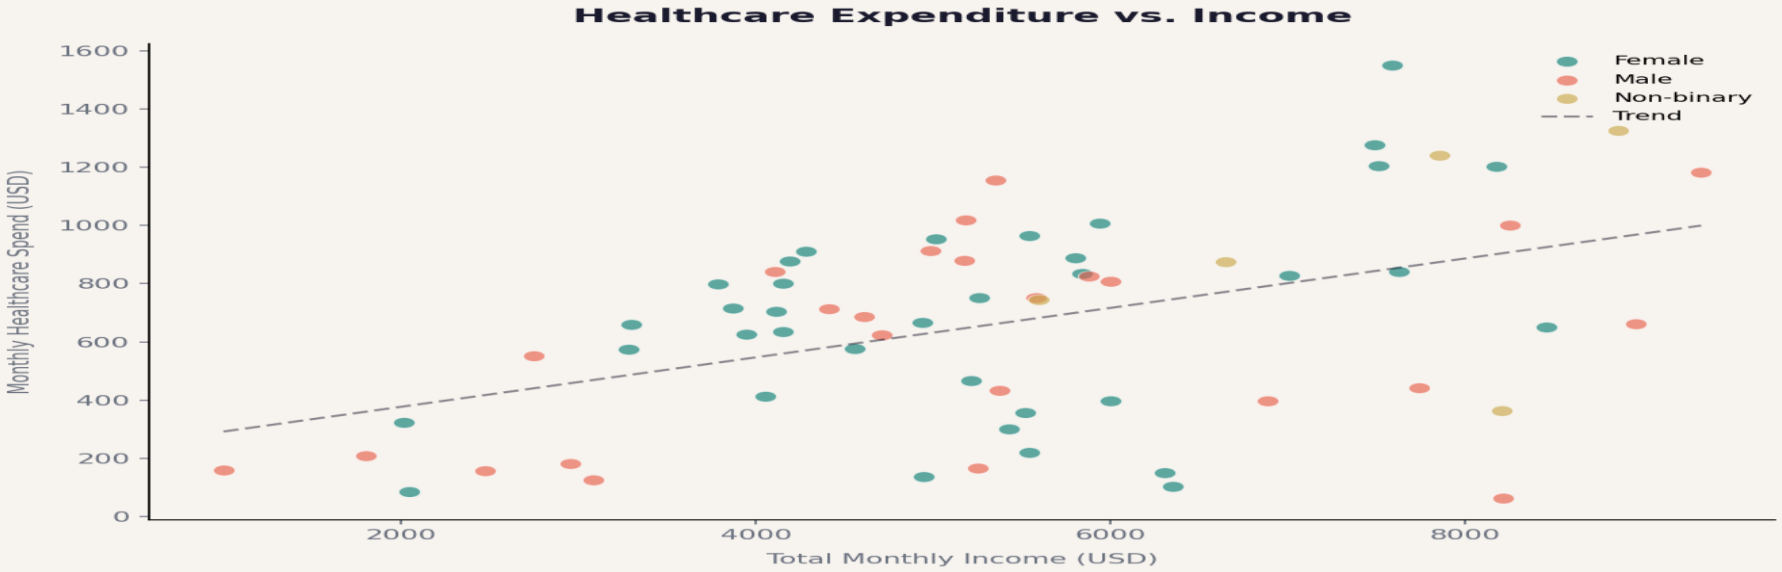
Average monthly expenditure per category broken down by gender



Healthcare Expenditure vs. Income

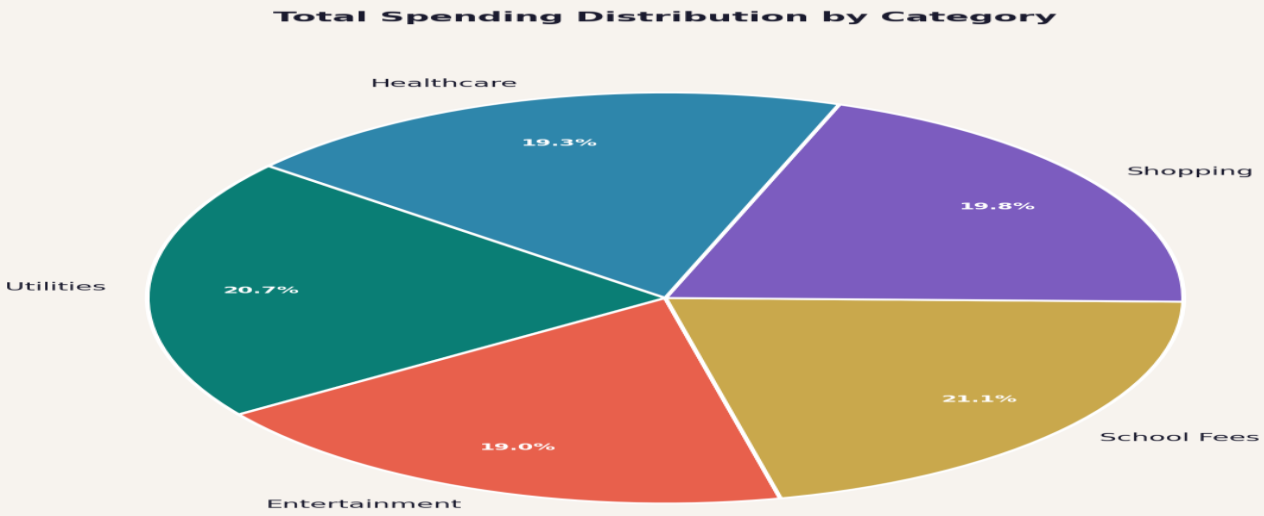
Scatter plot showing relationship between income and healthcare spend by gender

Trend Line
Positive correlation between income & healthcare spend



Total Spending Distribution by Category

Proportional breakdown of total expenditure across all 5 spending categories



KEY TAKEAWAYS

Summary & Recommendations

- Peak earning age groups represent the strongest target market for premium healthcare products.
- Gender-based spending differences reveal distinct priorities that should inform product positioning.
- Higher income participants allocate more to healthcare, suggesting willingness to pay for quality.
- School fees and healthcare represent the two largest expense categories overall.
